

## FEATURES

- Developed specifically for use in grain handling at food processing plants, breweries, elevators and grain transport vehicles.
- Designed, developed, tested and built by farmers and firefighters, working together to better save lives.
- Rapid deployment.
- One-piece construction.
- 15" storage diameter.
- Convenient carrying slots.
- Carrying bag included.
- Weighs only 18 lbs.
- Priced well below competitors.
- Training available.

Part #	Product	Wgt
TUTU-1	Turtle Tube	8.16 kg./18 lbs.

**At Turtle Plastics, we feel that even just one farm accident is too many. We believe that The Turtle Tube is the best tool available today for rapid response horizontal grain bin entrapment accidents.**

We've developed this educational brochure to raise awareness about potentially hazardous environments you may encounter on the farm. Utilizing these safety precautions can keep you safe when working in and around grain bins.

### Don't add yourself to the victim list!

This brochure is provided for general informational purposes only. Please consult applicable local, state, and federal laws and regulations regarding agricultural operations for additional information and requirements.

## ENTRAPMENT CATEGORIES

Entrapment in a grain bin is a leading cause of injury or death for farm workers. You can become entrapped in flowing grain in many ways.

### Unloading Entrapment

The most common entrapment, caused when a victim becomes engulfed in flowing grain that is being unloaded from a bin.

### Bridging Entrapment

A victim falls through crusted grain into a cavity created as a result of unloading a portion of the grain.

### Avalanche Entrapment

Can happen when vertically crusted grain becomes dislodged and engulfs the victim (one person died in just 12 inches of corn).

### Grain Transport Vehicle (GTV) Entrapment

A danger when the victim becomes engulfed in grain while located in a grain transport vehicle.

## ENTRAPMENT | GRAIN FLOW

In an entrapment, you are in a race you can't win. A flowing column of grain will pull you down to knee level and bury you in seconds.

Based on a 10-inch auger unloading at a rate of 4,086 bushels per hour.

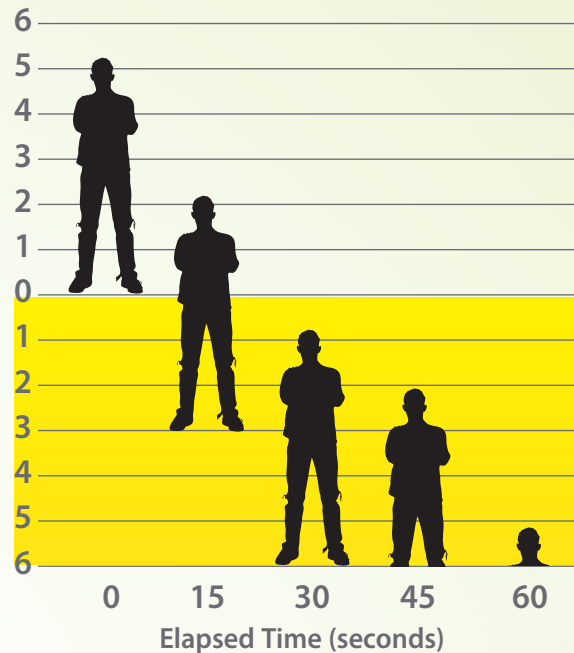

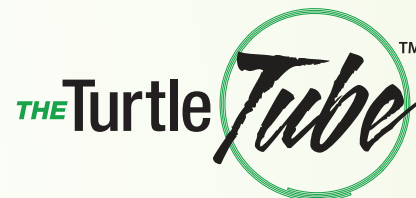

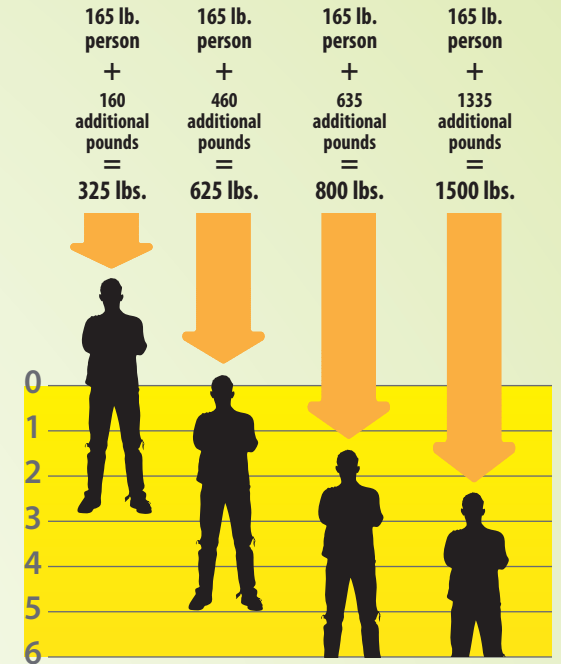

Chart Sources: Purdue University, Iowa State University

## VICTIM REMOVAL

The effort required to pull someone from grain is a major hindrance to quick rescue.
